

## Ask Assistant

- Using a custom prompt without selecting any text to change, provide
- `Full Context` - Takes the entire context of the note into consideration when you want to create something inline with previous text. `Enter`
- `No Context` - Is a fresh slate on your prompt. Useful when you want to start with a baggage of other writing methods. `Cmd + Enter` to select
- A new option to `Insert` the response to the note instead of replacing it.
  - If text was selected before using Ask Assistant, insert puts the response at the end of the selected text.
  - If no text was selected, insert puts the response at the position of the cursor.
- Changed the design of the action buttons.
- Improved error handling.

## Natural Language Date search for Doclinks

- Use natural language like `today` `tomorrow` `nov5` inside `[[ doclink ]]` to search for doclinks.  
(Option only shows up if a daily note for that date has been created)

## Improvements

- `Settings !'AI` now has a `Copy Key` button to copy the api key.
- `Settings !'AI` now has a Deactivate Integration button to remove the integration.

## Fixes

- Fixed an issue where copying articles or html from a browser would not work.
- Fixed an issue where external links would open inside the app window instead of a browser.
- `doclink` hovers or the changelog.
- Removed the setting to choose whether deleted files go to Trash or a custom location. This would require additional permissions from the OS, which resulted in errors.

---

now permanently deleted by default .

- Fixed the error background color for Cyberpunk theme .
